## DETAILED ACTION

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-24, drawn to A HYBRID ARCHED BRIDGE STRUCTURE, classified in class 52, subclass 248.
- II. Claims 25-51, drawn to THE METHOD OF FORMING THE HYBRID BRIDGE STRUCTURE, classified in class 52, subclass 741.13.
- III. Claims 52-65, drawn to THE COMBINATION, classified in class 52, subclass 250.

The inventions are distinct, each from the other because of the following reasons:

Inventions Group II and Group III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case, the combination or apparatus can be used in a different process to make a hybrid roof structure.

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different

process (MPEP § 806.05(f)). In the instant case, the bridge can be made using a different process not requiring all of the recited steps of the method. The bridge could be made by hand and construction machinery..

Inventions Group I and Group III are related as apparatus and product made. The inventions in this relationship are distinct if either or both of the following can be shown: (1) that the apparatus as claimed is not an obvious apparatus for making the product and the apparatus can be used for making a different product or (2) that the product as claimed can be made by another and materially different apparatus (MPEP § 806.05(g)). In this case, the product could be made by hand using conventional construction machinery and the apparatus could be used to make a roof.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
